HOW TO:
 Replace your old sewer pipe without tearing up your whole yard!

TRENCHLESS TECHNOLOGY FROM FLOHAWKS

Save Time
 Save Money

HOW TO:
 Replace your old or
 problem sewer pipe
 without tearing up
 your whole yard!

That was then ...

In the old days ...
breaking up
your yard was
hard to do.

www.flohawks.com

This is now!

Dig a small hole

Replace pipe

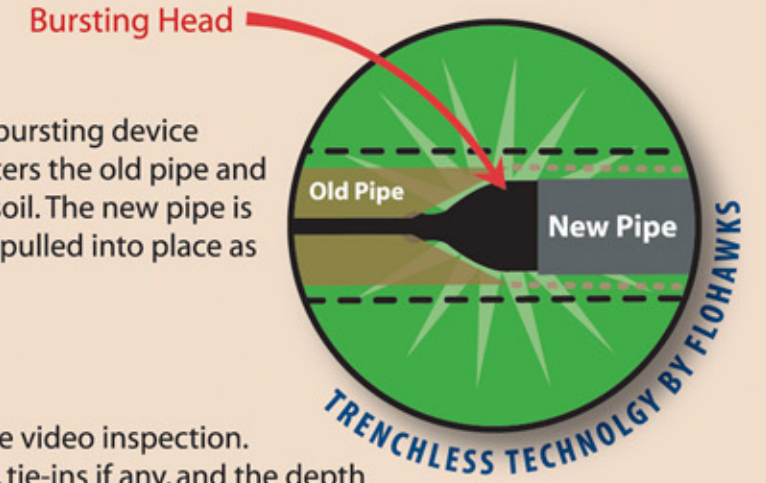

Finish and clean up

NEW TECHNOLOGY

There is a revolution occurring in the replacement of sewer pipes and drain lines. Digging through your yard to repair a sewer lateral is becoming a thing of the past. With a small hole – about the size of a sidewalk square – at each end of the run, we can pull pipe from your home to the main line. And the run doesn't have to be a straight line because we can do up to three 45 degree bends in a single pull. We can even upsize a line from 4" to 6" to provide you greater line capacity.

HOW IT WORKS

Pipe bursting is accomplished by pulling a bursting device through the existing pipe. This device shatters the old pipe and forces the fragments into the surrounding soil. The new pipe is attached to the bursting device and is thus pulled into place as the device advances.

GETTING STARTED

We diagnose the problem with **FREE** in-pipe video inspection.

- The camera will verify location, condition, tie-ins if any, and the depth
- It documents any problems with line, including sagging, roots and/or breaks in the pipe
- We then evaluate access for machinery and pipe bursting equipment
- Locate Utilities
- Set time line for the completion of the project

ADVANTAGES

- Major excavation **NOT** required
- Preserves your lawn, landscaping, patio, driveway and interior floor slab.
- Fast and reliable
- Less down time
- Minimizes disruptions
- Environmentally Safe
- Proven success
- Save **MONEY**
